

SOURCE BOUNDARY

MCP Sources

GitHub, Jira, CI/CD

Doctrine, Papers, APIs

Private raw data stays inside the organization.

Only aggregate, redacted evidence crosses into reasoning.

Source systems remain read-only inputs. The next lane receives only normalized, aggregate evidence.

EVIDENCE CONTROL PLANE

Aggregate evidence packet: no source code, no secrets, no customer identifiers, no employee-level records.

Classify Evidence

observed, modeled, unknown

Score Confidence

quality, freshness, bias

Attach Trace

source, owner, window

Block Weak Claims

no trace, no advice

Release Gate

human review

GOVERNED OUTPUT

Decision Packet

Governance Review

Publication Gate

Learning Loop

Learning updates rules and thresholds only after governance review. It does not bypass evidence gates.
